

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings of claims in the application.

LISTING OF CLAIMS:

- 1 1. (Currently Amended) A method of delivering, in the form of selectable images, a plurality of
2 auction items of a selected seller to a browser of a client computer system, comprising:
3 receiving, at an auxiliary server, a request from client browser for a main program; and
4 delivering the main program to the requesting client browser, the main program being
5 configured to receive seller specific information, and to load and activate one or more modules
6 including a picture displaying module for displaying selectable images, the picture displaying
7 module being configured to obtain a set of [[pictures]]selectable images of the selected seller's
8 auction items, based on the received seller specific information, to moveably display, on the
9 client browser, a set of [[pictures]]selectable images, showing the selected seller's auction
10 items, and to receive a user selection of a [[picture]]selectable image being displayed and to
11 redirect the client browser to an auction item document at an auction site associated with the
12 selected image; and
13 sending the set of selectable images, based on the received seller specific information, to
14 the browser.
- 1 2. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 1, wherein the step of receiving
3 a request from a client browser for a main program includes receiving the request from an
4 auction item document obtained from an auction site.
- 1 3. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 1, wherein the set of pictures is
3 displayed on the auction item document obtained from the auction site.
- 1 4. (Previously presented) A method of delivering, in the form of selectable images, a plurality

2 of auction items of a selected seller to a client browser as recited in claim 1,
3 wherein the picture displaying module is configured to moveably display the set of
4 pictures at a controllable speed; and
5 wherein the controllable speed is controlled by a current position of a pointing device
6 connected to the client computer system.

1 5. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 1,
3 wherein the client computer system includes a display output device and the client
4 browser occupies a graphical window on display output device; and
5 wherein the picture displaying module is configured to moveably display the set of
6 pictures horizontally in the client browser graphical window.

1 6. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 1, wherein the main program is
3 configured to load and activate a categories module that maintains a set of categories available
4 on the auction site from the specified seller.

1 7. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 6, wherein the set of categories
3 available on the auction site from the specified seller is stored on the auxiliary server.

1 8. (Previously presented) A method of delivering, in the form of selectable images, a plurality
2 of auction items of a selected seller to a client browser as recited in claim 6, wherein the main
3 program is configured to load and activate an item links module that maintains a set of item
4 links for each category in the set of categories available on the auction site from the specified
5 seller.

1 9. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 8, wherein the set of item links
3 available on the auction site from the specified seller is stored on the auxiliary server.

1 10. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 9, wherein the set of item links
3 includes an item name associated with each item link.
